

There's nothing worse than frozen pipes, so wrap up this winter.

heat, insulate and **protect** your home

Now that it's getting colder outside, it's time to protect your pipes, so here's some handy hints to be prepared:

- The best protection is warmth, so keep your home heated, even if you're going away.
- Make sure leaky taps and valves are repaired, and that draught excluders are fitted.
- Keep your water tank cosy, and insulate your pipes.
- Have an emergency pack handy with matches, candles, a radio and a torch.
- Keep emergency numbers for registered plumbers, electricians and insurers at hand.
- And, keep an eye out for your neighbours, especially the elderly.
