# **Development Services**

**Remote Inspections App Phase 2 New Main Installation** Step by Step Guide

#### **Development Services** Remote Inspections App Phase 2

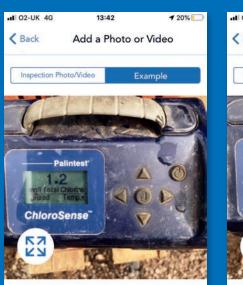

#### PLEASE NOTE UPDATE ON PLOT CONNECTIONS IN APP

Development Services sent a communication out both last year and a reminder again this year that all plot connections must undertake a 5 step check process before they are connected onto the live water main.

In order to capture this information we have added the requirement for two additional photographs to be taken on the connection step on the Remote Inspections App. Please see the example images (opposite) and we will add this into our Technical Guidance Pack for distribution.

#### Please contact

RemoteInspections@scottishwater.co.uk if you require further information on the 5 step check.

#### Guidance

Please provide a photograph of Sampling Test unit showing Total Chlorine Residual.

#### Guidance

Please provide a photograph of Sampling Test unit showing Free Chlorine Residual.

#### **5 STEP CHECK**

- A visual check on the flow and pressure.
- An on-site test to ensure there is a chlorine residual in the water.
- A visual check on water quality by filling a clear sample container to check on colour and turbidity.
- A check on the taste and smell of the water.
- Should any of the above fail, a sample will be taken and tested.

**Development Services** Remote Inspections App Phase 2

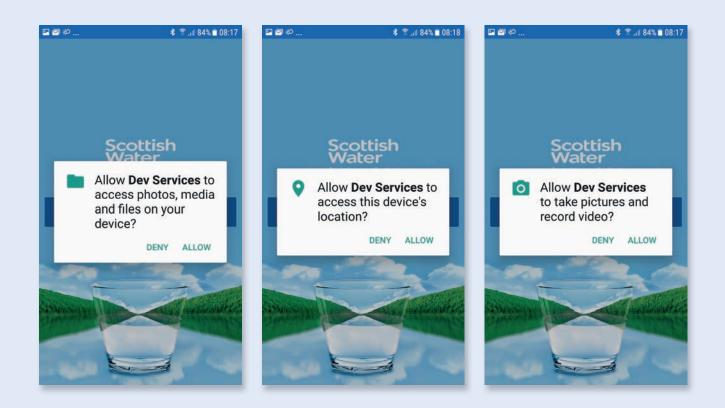

00.

Introduction

Step by Step Guide

#### Log-in Allow access

The Log-in screen will ask the user to allow the app to access location services and access to photos and media. This is to enable geotagging for any submission. Please select **ALLOW** for all.

Introduction

Step by Step Guide

#### **Developer search** Choose developer

After log in, the first screen you will see is **CHOOSE DEVELOPER**. There is a search bar at the top to search for specific Developers.

When you have located the correct developer, tap on the selected developer and this will take you to a list of sites relating to that developer.

You will see another search bar here which allows you to search for a specific site by name or case reference. Tap on the selected site to access that site.

Single house builders can be found under **INDIVIDUAL** heading and can be located in the same way be searching the case reference or site name.

Introduction

Step by Step Guide

#### **Site Summary** Developer Site Screen

The big difference from Phase 1 is we now have Track and Main options.

The site screen shows site name, Developer details, Case Reference, type of application and number of submitted inspections.

The bottom section shows Track and Main and also status balls show status summary of submitted inspections.

To access track inspections tap on **Track** 

To access mainlay inspections tap on Main

# 01. Mainlay

#### **Development Services**

Remote Inspections App Phase 2 Step by Step Guide

Mainlay

### **Tie-in** This is the first Mainlay screen

This screen shows a list of available Tie-ins e.g. Advanced, Secondary and Primary.

Please note: When first opened **NO TIE-INS** will be showing and user is required to tap bar at bottom of screen to **ADD MAINLAY INSPECTION**.

When any mainlay inspection is submitted, Development Operations admin team will inspect submission and pass or fail. They will also associate this to the relevant tie-in depending on submitted application.

Tap on **ADD MAINLAY INSPECTION** to start a new inspection.

# Back 01008

INSPECTION' as a first step. This will then be linked to a tie-in upon review. After linking, the mainlay will appear within the correct Tie-In and all other inspections will be available to complete.

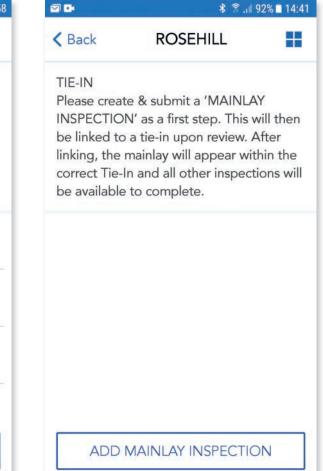

>

>

>

 Advanced Tie-In DSCON-0001555-L5G
 Secondary Tie-In DSCON-0001509-J3H
 Primary Tie-In DSCON-0001465-W4V

ADD MAINLAY INSPECTION

### **Create new Mainlay**

Please read guidelines relating to inspections and tap **CONFIRM**.

You will now see **NEW INSPECTIONS** available.

Tap on the available **NEW MAINSLAY INSPECTION** to begin inspection.

#### **Mainlay Inspection**

Each Tie-in section has been split into separate Inspections, this allows flexibility for users.

Each inspection must be completed, submitted and approved in order.

Only the highlighted section is available and the following sections are 'greyed out' until previous inspection has been approved e.g. Pressure Test is 'greyed out' until Mainslay has been approved. After Mainslay and Pressure Testing completed and approved, Disinfection & Neutralisation becomes available and so on.

Inspections are also split into Steps with a 'soft save' function at the end of each step.

This allows the user to complete each step in order and go back into inspection at last completed step and details will be saved providing that step has been completed.

Tap on Mainslay to open inspection steps.

#### **Mainlay Inspection** Requirements

The first step highlighted is **Requirements** and the various steps within the Inspection below are greyed out. The **Requirements** list has allowed us to reduce the amount of questions and make the app more user friendly.

Tap on **Requirements** and read through all requirements and tap **ACCEPT**.

This will take you to the next screen and you will now see a green tick beside **Requirements** to show this step has been completed and the next step is now available. The following steps are still greyed out to enable you to complete the inspection in the correct order.

Step by Step Guide

#### Mainlay Inspection Markup

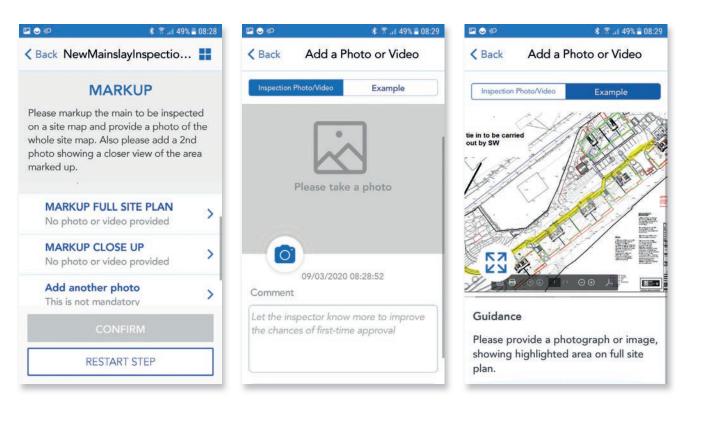

This step is asking you to provide a highlighted site plan and also a second close up image of the section you are working on.

When any images are requested within the app we have provided an example image and guidance text to help you capture the correct photo/image.

Tap on **MARK UP FULL SITE PLAN** this will show image capture screen.

Tap on **Example** at top right of screen and this will show example image and guidance text.

Tap **INSPECTION PHOTO/VIDEO** and tap on **CAMERA ICON** to capture image.

Mainlay

Step by Step Guide

#### Mainlay Inspection Markup

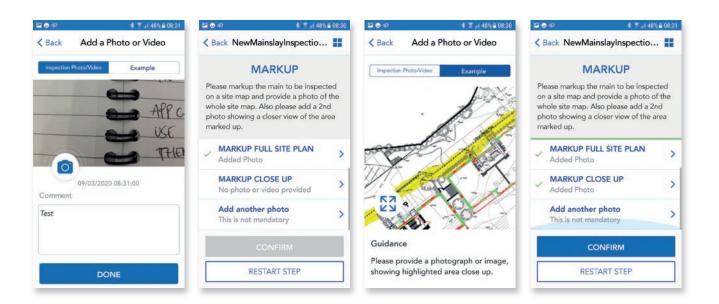

When you have taken a photograph, the captured image is visible and you will see a comment box below. Please input any additional comments that may be required to support your submission and then tap **DONE**.

After submitting image for full site plan, you will see a green tick at the left hand side and **MARK UP CLOSE UP** is available.

Follow the same process as before to capture the close up image and after both images have been captured you have the option to **CONFIRM** or **RESTART STEP**.

The **RESTART STEP** function is built in at the end of each step to allow the user to restart if the submission has failed or an error has been made. This means the user can restart and submit each step rather than have to complete the full inspection again e.g. we may require better photographs for that specific step or an incorrect drawing or location for mark up has been submitted.

Tap **CONFIRM** to submit and complete this step.

Mainlay

Step by Step Guide

### **Mainlay** Step 1

In this step you will be asked a series of questions and to supply multiple images.

Tap on **What is Main Type** and options box appears, we have built in various options to allow for multiples and also retail main laying, which may have additional Fire Mains. If you select **Fire + Potable** you will be asked for details for both Fire and Potable pipes. Please ensure you select correct Main type. Once selected you will now see the green tick beside **What is Main type**.

**Development Services** Remote Inspections App Phase 2

### 01.

Mainlay

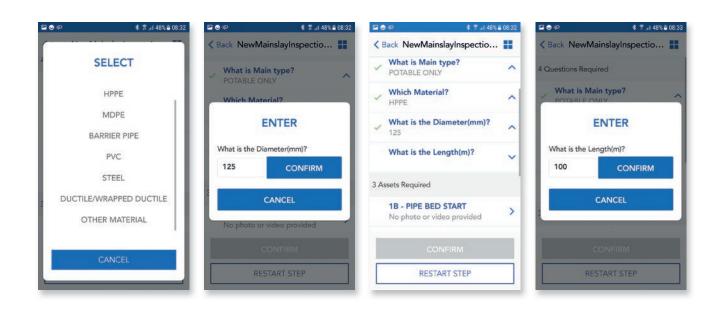

Step by Step Guide

### **Mainlay** Step 1 – Question

Please follow the same process and complete the following questions for Material, Diameter and Length. Tap on **Which Material** to show the option list and select the correct option.

The other questions will show a free text box to allow user to input the exact diameter and length of main lay section.

**Material Type** will determine the relevant follow on questions e.g. if HPPE, MDPE is selected then follow on questions will require images of marker tape, Fusion box and tent etc. and specify the type of pressure test (PE). If Ductile is selected, there is no need for marker tape but we will require images of thrust blocks, self-anchoring joints and water loss/added pressure tests will be applicable.

Mainlay

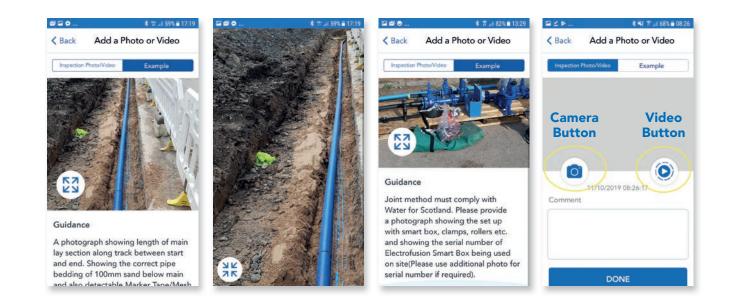

Step by Step Guide

### **Mainlay** Step 1 – Images

Please follow the same process as before for image capture.

**Please note:** When you tap on **Example** image, because of the guidance text, part of the image is obscured. If you tap on the white circle on bottom left of image, this will remove the text box and allow you to zoom image. You can also move image about and zoom in and out to see full example. Also if you are unsure what is required tap **Example** for guidance text and example image.

There is also now a video option, where you can submit a 10 second video. To capture video, please tap on video icon next to camera icon.

Mainlay

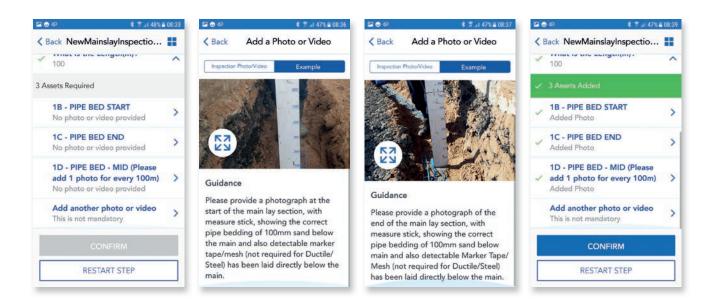

Step by Step Guide

### **Mainlay** Step 1 – Images

In this step you will be required to capture images for the pipe bed. Each section of main lay will require a minimum of 3 images i.e. start, middle and end of track up to 100m in length. Over 100m we will require an additional image of the pipe joint.

After all images have been captured you will see the green ticks on the left and **CONFIRM** is now available.

Tap **CONFIRM** to complete this step, this will also save all details in Step 1.

#### Mainlay

Step by Step Guide

#### Mainlay Step 2

Step 2 is now highlighted and available. Similar to Step 1 you will be asked a series of questions and to supply multiple images. Unfortunately this step is asking for the most images, but this matches what will happen on site and allows user and the app to save all details within Step 2.

Tap **What is pipe depth** and free text box appears, input depth of main.

Tap on **Which Tape jointing method** and option list will appear, select the correct option from Flange or Valve/Hydrant chamber.

The green ticks are now visible beside questions and also show the answers you have provided.

#### Mainlay Step 2 – Image capture

You will be required to submit the following images, **PIPE SIZE**, **PIPE DEPTH** (start, mid, end) **TAPE JOINING METHOD** (start and end) and **KERB** (start, middle, end).

Please follow same process as Step 1 for image capture by tapping on image selection and checking example image and guidance text to capture the required image.

After all images have been captured, the green ticks and **CONFIRM** button are showing.

Tap **CONFIRM** to complete and save this step and proceed to next step.

Mainlay

Step by Step Guide

### **Mainlay** Step 3

Step 3 is now highlighted and available, in this step we are capturing the Pipe jointing method and you will be asked one question and to supply multiple images, depending on jointing method selected.

Tap on **Which Pipe Joint Method** and option box appears, select the correct option from Butt Fused, Electro Fusion or Mechanical Coupling

#### ..... \$ 😤 .ul 83% 🖬 13:20 \$ 🖀 л 83% 🖬 13:21 ...... \$ 🖀 al 83% 🖬 13:22 ...... \$ 3 ... 83% 13:22 ..... < Back NewMainslayInspectio... # < Back NewMainslayInspectio... < Back NewMainslayInspectio... < Back NewMainslayInspectio... # r questions required BUTT FUSED MECHANICAL COUPLING NewMainslayInspections\_01 Which Pipe Joint method is 5 Assets Required 3 Assets Required used (must comply with Water > Requirements for Scotland Standards and $\sim$ **1M - BACKFILL START** > **1M - BACKFILL START** Specifications)? Mainlay

Step by Step Guide

### **Mainlay** Step 3 – Images

After completing the question you will be asked to supply 3 or 5 images, depending on jointing method selected e.g. if you have selected Butt Fused or Electrofusion then we require additional images of Fusion box and set up and also Tent/shelter.

Step 3 also captures backfill images, start, middle and end of track, showing main has been part backfilled with sand and warning marker tape fitted. Capture images as before by tapping on image selection and checking example image and guidance text to capture the required image.

After all images have been captured, tap **CONFIRM** to complete and save step.

### **Mainlay** Step 4

Mainlay

Step 4 is now highlighted and available, In this step we are ensuring that pipe is protected and has no open ends and also if any additional apparatus is installed or main is crossing a carriageway.

Follow the same process as previous for answering questions.

Tap on **Which method of pipe protection** and option list appears, select correct option and select **YES/NO** for the following questions asking if you have fitted any additional apparatus e.g. valves or hydrants and also if main is crossing the carriageway.

#### Mainlay

#### Mainlay Submit inspection

After all steps have been completed there will be a section to review and submit. Please read through this and then tap that you have read and agree to the terms.

A pop up box will appear allowing to you add any additional comments to support your submission. You will then be asked if you have any more Mainlay Inspections to submit. Selecting **YES** allows you to submit further inspections.

Selecting **NO** lets Development Services admin know that main laying is now complete and allows admin to check submissions for final approval.

Pressure Testing

Step by Step Guide

#### **Pressure Testing** Start inspection

All inspections within the app follow the same process, where each inspection (Mainlay, Pressure Testing, Disinfection, Sampling etc.) is split into separate steps. Each step must be completed in order before the next step is available and the app will save progress at the end of each step.

Follow the same process as before with Mainslay and tap on **Pressure Testing**, then tap on **Requirements**, read through the list of requirements and tap **ACCEPT**.

Pressure Testing

Step by Step Guide

#### **Pressure Testing** Step 1

Follow the same process as previous steps for answering questions.

Tap on **Step 1** – This will show 4 questions.

Tap on **What is Main Type** and select correct option from options list e.g. Potable, Fire or Other.

Tap on **What is pipe material** and select correct material option from dropdown list.

Depending on which material is selected will determine which type of test will become available.

To comply with testing specification you will require a waiver if the section of pipe you are testing is above 200mm in diameter and over 200m in length or below 200mm in diameter and over 1km in length.

If a waiver is required for either option, please tap **YES** and another pop up box will open which allows you to enter the waiver number you were provided by Development Services.

After all questions are completed, tap **CONFIRM** to complete this step.

#### **Pressure Testing** Step 2

Step 2 is now highlighted and available. In this step we are capturing the type of pressure test, pipe rating (SDR or PN if ductile), number of sections of main and also details of who is carrying out testing.

**Note:** It may be possible to test multiple sections of pipe together, under the one test, if they meet the criteria e.g. the same SDR rating.

Follow the same process as previous for answering questions.

## 04.

Pre Sample

Step by Step Guide

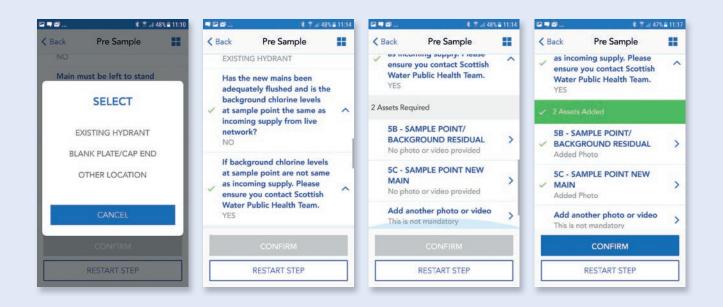

### **Pre Sample** Step 2 (continued)

Select sample location point e.g. Existing hydrant, blank plate/cap end etc.

Again we have built in another question to protect Scottish Water network and ensure background chlorine levels are acceptable and if not then you are required to contact the Scottish Water Public Health Team.

We also require images of sample point for background residual and sample point on new main.

After completing questions and images, tap **CONFIRM** to complete and save this step.

Pre Sample

Step by Step Guide

### Pre Sample Step 3

This step is capturing details of Free and Total Chlorine residuals, licensed stand pipe and sampling unit.

Tap on questions to bring up free text box to allow you to input free and total chlorine results

After questions have been completed you will be required to provide images of Stand pipe, residual readings and sampling unit.

Step by Step Guide

### **Connection** Step 1 – Image capture

After questions have been answered then image capture is required

Tap on image request and use example guidance and text to capture the required image.

After all questions have answered and images captured it will show as green ticks and **CONFIRM** is now highlighted.

Tap on **CONFIRM** to complete and save this step.

Connection

Step by Step Guide

### **Connection** Step 2

Follow the same process as previous and tap Step 2 to show the questions.

The first question here asks **Will you be** undertaking the Tie-in?

Some connections may be on the live Scottish Water network and only accredited contractors or Scottish Water staff are able to carry out this type of work.

If you select **NO**, this will allow you to complete Step 2 with no further questions showing.

Tap **CONFIRM** to save step and proceed to Step 3.

If you select **YES**, this will show further questions and images required to complete this step.

#### **Post Sample** Step 3 – Image capture

Tap on image title e.g. 7D – Stand Pipe and follow same process as previous for image capture, using example image and guidance text and/or guidance pack to capture the correct images.

After all images have been captured green tick will be showing and **CONFIRM** button highlighted.

Tap on **CONFIRM** to complete and save this step.

Post Sample

Step by Step Guide

#### **Post Sample** Step 4

This step is capturing images only after samples have been taken i.e. Sample Pro-forma, filled sample bottles and sample storage method.

Please use example image and guidance text and/or guidance pack to capture correct images.

After all images have been captured, tap on **CONFIRM & COMPLETE** to complete and save this step and proceed to submit inspection.

Advance Tie-in

Step by Step Guide

#### Advance Tie-in Start inspection

This inspection is capturing details of an Advance Tie-in Connection and is similar to Connection process for Primary and Secondary Tie-ins.

Follow the same process as other inspections and tap on Advance Tie-in Connection to begin inspection. This will open another page for New Advance Tie-in Connection, with the option to **ADD INSPECTION** if required e.g. there may be multiple connections for a specific site

First option available is Requirements, tap on **Requirements**.

Read through the list of requirements and tap **ACCEPT**.
