

**Scottish
Water**

Trusted to serve Scotland

Taking care of your environment

What we are doing.

Scottish Water has been granted planning approval to install an underground storage tank beneath the grassed open space on the south side of Braidholm Road, next to its junction with Whitton Drive and Graffham Avenue.

During periods of heavy rain, it will alleviate pressure on the existing waste water network by providing capacity for extra stormwater storage. The water will then be pumped back into the network when capacity allows.

Above ground, we are constructing a small kiosk which will house the pump power supply and a vent stack to allow the movement of air into and out of the tank when it is filling/emptying.

Two maintenance access hatches will be installed at ground level

Upgraded sewer pipework and manholes will be installed along a section of Braidholm Road.
